

# DISCOVERY ATTENDER<sup>®</sup>

Electronic Search and Discovery

Discovery Attender is a software tool designed to automate the search and collection of electronically stored information (ESI). This stand-alone application finds documents in multiple data stores using a cost-effective, reproducible methodology. Whether you're involved in litigation, security, electronic discovery, compliance or simply need assistance culling mountains of data, Discovery Attender allows in-house talent to efficiently gather information and produce results in a timely, defensible manner.

## Discovery Attender can easily search content in:

- PST Files, Exchange Mailboxes & Public Folders

### **NEW** • **SharePoint Files**

- NSF Files
- Files on Local Drives or Network Shares

## Features

### General Features

- Reduce time and cost associated with e-discovery
- Find and retrieve data with efficient and defensible tool
- Secure responsive items from a variety of sources
- Robust audit trail and chain of custody reporting
- Simultaneous processing of multiple data stores
- Delegate searching to attorneys, paralegals, HR, etc.
- Fully portable, centrally accessible projects
- Non-invasive, small footprint
- Easy to install, easy to use

### Search Features

- Simple interface for search creation, monitoring and review
- Examine files stored on file shares and SharePoint servers
- Retrieve email located in Exchange servers, PST files, NSF mail stores and more
- Search common file formats like Word, Excel, PDF, ZIP etc.
- Customizable search criteria includes keywords, dates, addresses, size and types
- Keyword searching options include lists, phrases, proximity, regular expressions, Boolean logic and integrated expression testers
- Search within message headers, subject body, attachments, dates and types
- Identify secondary criteria in result sets using auto-labels
- Log, detail and export exceptions

### Data Reporting & Retrieval

- User-friendly interface for management of result items
- Numerous options and formats for exporting results including PST, NSF, .MSG, .EML and native format
- Custom data deduplication based on user criteria and hashes
- Custodian management for effective grouping
- Annotation, marking and labeling of result items for ease of review
- Filters by location, custodian, address, types or custom fields
- Optional index to further refine data set
- Key properties of message and file results stored locally
- Flexible reports detailing search criteria, statistics and result items
- Fully accessible back-end database for custom queries
- Integrated text viewer for hit highlighting and review

### Architecture

- Non-intrusive, user-friendly installation
- Supports Exchange 5.5 through 2010 (including Online Archives)
- Works with ASCII or Unicode PSTs
- Installed on a desktop or server, most functionality requires no additional agents or services

### System Requirements

- Windows XP or higher
- 1 GHz or higher CPU
- 1 GB of RAM or higher
- Outlook 2000 or higher
- Approximately 50 MB HD for the installation (additionally hard drive space will be required as projects, searches and optional indexes are created)
- .Net Framework Version 2.0 (installed, if not present)
- Local administrator rights for the installation
- Permissions to the targeted mail stores and network shares
